

InkJet earns ISO 9001:2000 certification

August, 2004 – InkJet, Inc, the supplier of low cost, high quality inks and replacement parts to the coding and marking industry, has been certified ISO 9001:2000 by Perry Johnson Registrars, a world leading quality management systems registrar.

"InkJet is dedicated to being a high quality supplier and our ISO certification demonstrates our commitment. It illustrates the importance we place on continually providing quality products and services and assures customers that our processes conform to high standards," noted Dr John Craven, Director of Research and Development.

"Customers around the world increasingly require ISO registration from their suppliers. As such, we anticipate that earning ISO compliance will help us expand our business worldwide." The quality management standards for the ISO 9000 series program were developed by the International Organization for Standardization, based in Geneva, Switzerland. In order to receive certification, a company must document its quality management system and provide objective evidence that it follows this system. Once registration is achieved, the company is subject to continuing review and audit to maintain certification.

About InkJet:

InkJet, founded in 1990, provides high-quality, competitively priced inkjet printing inks, fluids, parts and technical support to the global coding and marking industry. In a segment dominated by OEMs such as Videojet, Imaje and Domino, InkJet has proven that quality, price and service delivers superior value.

Its corporate office and recently expanded research, manufacturing and warehouse facilities share a 26-acre site in Willis, Texas. Through its extensive sales network, InkJet serves more than 3000 customers in the healthcare, pharmaceutical, mechanical, automotive, food, beverage, cosmetic and other industries in more than 50 countries.

InkJet is an ISO 9001:2000 Certified Company.
